Specialist Member of The Jordanian Endodontic Society

Vice-President of the Jordanian Endodontic Society Private Practice Amman/Jordan

WILL CBCT BECOME A STANDARD OF CARE IN ENDODONTICS?

Since its commercial introduction into dentistry in 2001, cone beam computed tomography (CBCT) has been rapidly evolving into a new standard of care in endodontic therapy. In just over a decade, CBCT has exploded onto the dental landscape and permitted dental professionals a degree of three-dimensional (3D) anatomic truth in endodontic imaging previously unavailable and unattainable. Will CBCT become part of the standard of care before we do root canal therapies or it will remain limited to certain conditions due to its harmful radiation exposure?
